TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, SQL, Rust, C#, Java
Frontend:	React, Next.js, React Native, Tailwind CSS, Three.js, Framer Motion, Apollo Client
Backend:	Node.js, GraphQL, tRPC, Express, REST, Prisma, PostgreSQL, Redis, BullMQ, Elasticsearch
Infrastructure:	AWS (Lambda, EB, S3), Docker, CI/CD, Vercel, PM2, Puppeteer
Practices:	System Design, API Design, Performance Optimization, Code Review, Technical Mentorship

EXPERIENCE

American Poolplayers Association (Remote) — Feb 2021 - Present

Software Engineer

- Lead feature development and technical planning for web and mobile applications serving 200,000+ members nationwide, owning tickets from requirements through release
- Architect and maintain scalable systems across member services, tournament management, league play, and internal staff tools
- Drive frontend performance improvements — reduced unnecessary re-renders, optimized component architecture, and improved mobile responsiveness across the platform
- Improve backend reliability through query optimization, caching strategies, and response time reduction on high-traffic API endpoints
- Enforce code quality through documentation, thorough code reviews, and mentoring engineers on best practices and modern development patterns

HuntNHook — 2025 - Present

Co-Founder

- Co-founded and sole-engineered a two-sided marketplace for fishing charters, hunting trips, and outdoor recreation — owned every layer from schema design to deployment
- Built full Stripe Connect integration: hold-based payments, cancellation compensation, dispute handling, delayed host payouts with daily sweep jobs, and idempotent webhook processing
- Implemented PostGIS spatial search with bounding-box filtering, distance sorting, and multi-dimensional filters across species, techniques, price, and date availability
- Architected PM2 cluster deployment with dedicated BullMQ worker processes, Redis PubSub for cross-instance GraphQL subscriptions, and 3-tier cache invalidation

Tech: Next.js, TypeScript, PostgreSQL/PostGIS, GraphQL, Stripe Connect, Redis/BullMQ, Prisma, Apollo Client

PROJECTS

Rafa Sauna — Solo Developer (Contract) 2025

Full-stack booking, membership, and POS platform for a sauna house. Next.js admin dashboard, React Native NFC wristband app, and self-service kiosk for contactless food and drink orders.

- Built NFC wristband pipeline: JWT generation, React Native writer, and kiosk reader for contactless tab orders
- Designed in-memory booking engine with party-aware capacity, dynamic pricing, and blockout rules
- Integrated Stripe: subscriptions, one-time payments, Apple Pay, webhooks, refunds, and promo codes

Tech: Next.js, TypeScript, Prisma/PostgreSQL, tRPC, Stripe, AWS EB, React Native, NFC

Construction Automation Platform — Contract Developer 2025

Internal automation tool for a construction company. Reverse-engineered a closed third-party API to enable data entry automation, sales pipeline syncing, and invoice generation.

- Reverse-engineered an undocumented API to programmatically interface with the client's existing vendor platform
- Automated 20+ daily data entry records and built pipeline-to-invoice sync mapping construction models into auto-generated invoices
- Implemented headless browser automation via Puppeteer on AWS Lambda for workflows the API couldn't cover

Tech: Next.js, TypeScript, PostgreSQL, Puppeteer, AWS Lambda

EDUCATION

Lambda School — Full Stack Web Development 2020

Sierra College — Computer Science 2018
